Saroj Adhikari

Senior Full Stack Engineer (TypeScript, Distributed Systems, AWS)

Birmingham, UK — +44 07587 399562 — sarojadhikari076@gmail.com — LinkedIn — GitHub

Professional Summary

Full Stack Engineer with 6 years building TypeScript systems across startups and production environments. Led backend and frontend architecture across distributed services, improving system performance and deployment reliability. Experienced in scaling systems end-to-end, managing production incidents, mentoring engineers, and leveraging AI-assisted development workflows to accelerate productivity and automation.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java
Frontend: React, Next.js, Tailwind CSS, Component Architecture, Performance Optimization, Cypress
Backend: Node.js, Express, NestJS, REST APIs, Microservices, WebSockets, Vitest
Databases: PostgreSQL, MongoDB, MySQL, Redis
Cloud / DevOps: AWS, GCP, Docker, Kubernetes, CI/CD, GitHub Actions, Monitoring
Architecture: Distributed Systems, Event-Driven Architecture, API Design, System Design
AI Engineering: LLM Integration, AI Workflow Automation, OpenAI APIs, GitHub Copilot, Cursor, Claude

Professional Experience

IPG Automotive — Birmingham, UK
Full Stack Software Engineer — *April 2025 – Present*

- Decomposed a monolithic backend into **9 independent microservices**, improving deployment independence and cross-service decoupling.
- Designed and implemented **30+ RESTful backend APIs** with consistent schema validation and versioning.
- Migrated **50k+ lines** of JavaScript to TypeScript, reducing runtime errors and improving maintainability.
- Introduced event-driven workflows using Kafka to enable asynchronous processing across services.
- Evaluated AI-assisted developer tooling to improve implementation speed, code quality, and efficiency.
- Reduced Docker image size from 1.2GB to **340MB**, improving build and deployment speed.
- Mentored **3 engineers** on TypeScript, AI-assisted development, and system design through code reviews.

Sliceup — Leicestershire, UK
Founding Full Stack Engineer — *October 2023 – March 2025*

- Built the platform from scratch as **first engineer**, owning architecture, infrastructure, and delivery.
- Designed a **5-component system** covering API, dashboards, and real-time order processing.
- Scaled platform to support **110+ vendors and 10k+ users** with consistent performance under load.
- Implemented real-time order and driver allocation system, reducing delivery latency across the network.
- Led technical decisions across backend, frontend, AWS infrastructure, and AI tooling, working with founders.

Naamche — Kathmandu, Nepal
Frontend Software Engineer — *June 2021 – September 2023*

- Reduced page load time from 3.2s to **900ms** through code splitting and performance optimization.
- Improved Core Web Vitals by **35%**, leading to better user retention and SEO performance.
- Built reusable component library with **30+ components** adopted across multiple teams.
- Increased test coverage to **75%** and reduced regression bugs through Cypress e2e testing.

Swivt Technologies — Kathmandu, Nepal
Full Stack Software Engineer — *May 2018 – June 2021*

- Delivered **5+ production applications** across fintech and e-commerce domains.
- Improved database query performance by **55%** through indexing and query optimization.
- Implemented Redis caching, improving response times by **40%** under high load.
- Set up CI/CD pipelines, reducing deployment time from 2 hours to **15 minutes**.

Education

Birmingham City University — Birmingham, UK
MSc Computer Science — *Completed 2024*
